Fully Integrate Your HMI and PC-Based Control With MachineShop™

Project Manager

MachineShop's Project Manager is a simple, intuitive way to configure and manage automation projects. It conveniently collects configuration data and runtime files into a central location. By allowing MachineLogic and Interact projects to appear in a single, unified environment, development tasks are simplified.

The Project Manager allows the user to…

■ Backup and restore data from storage devices such as disks, hard drives and networks

■ Document all project information

■ Access data on runtime storage requirements and components used for the application

■ Easily perform project tasks with the guidance of "Wizards"

■ Use a common tag list for MachineLogic and Interact

CTC Parker Automation's MachineShop™ is an integrated suite of Windows-based software tools for developing Interact HMI and MachineLogic PC-based control applications.

MachineShop's convenient toolbar includes a Project Manager, Environment Navigation and a PowerStation Transfer area. Whether you buy Interact, MachineLogic, or both, these tools make it easy to manage, create, integrate and transfer your machine applications.

MachineShop runs on a standard PC, as well as CTC's full line of PowerStations, integrating all of these products into a bundled solution that can fit the requirements of any machine.

For a complete machine control solution, integrate MachineLogic control with Interact HMI software - and run it on one of CTC's PowerStation workstations.

PowerStation Transfer

Once an application has been developed, MachineShop's PowerStation Transfer manages and transfers files that are needed to create or update a runtime project. These convenient tools simplify the transfer process, so projects can go online quickly.

PowerStation Transfer can…

■ Automatically transfer run time projects including Interact and/or MachineLogic

■ Back up and restore runtime projects

■ Transfer projects via the Internet

■ Transfer with a serial connection or direct to Compact FLASH

■ Help users select transfer options, using Wizard-based guidance
